

Precast Concrete Coring Technician – Topsham, ME

Precast of Maine is looking for an individual to join the team as a Precast Concrete Coring Technician. The precast shop specializes in using forms to pour and produce concrete structures for utility and infrastructure construction projects.

The Coring Technician will be responsible for using the large industrial coring machine and related equipment to core the necessary holes in a variety of concrete products such as Manholes, Catch Basins, Utility Boxes, and more.

Most of the coring duties will take place inside the shop in Topsham, ME. Due to the size and scope of some concrete products and how they are used on construction projects, some coring will be done outside of the shop and on site at the project location using the mobile coring van equipment.

When the coring needs are caught up, the selected candidate will assist in the production shops alongside the Precast Concrete Laborers. As a Laborer, duties will consist of general laboring duties associated with pouring concrete into prefabricated forms.

We are willing to train the right candidate who demonstrates an interest in the process, an eagerness to learn, is dependable, and who is motivated to work as part of the Precast team.

This is a full time, year-round position.

Requirements for all candidates:

- Previous precast concrete experience
- Previous concrete cutting experience is preferred, but not required
- Ability to work independently and as a team
- Previous laboring experience
- Ability to work the required hours (6am – 5pm)
- Positive “get it done and done right” attitude.

Benefits:

Enjoy working with a great crew! Home every night, no overnight travel. Being part of a team, vacation, holidays, health & life insurance, dental, 401k and profit sharing, boot reimbursement, and more.
